CPSC 304 Project Cover Page

Milestone #: 1

Date: July 21, 2026

Group Number: 41

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
George Yuan	11195369	s0w9l	gyuanedu@gmail.com
Adrian Wong	79387718	o3v5f	adrianwong200@gmail.com
Sam Dittmar	47583216	t6f7i	sam.dittmar@outlook.com

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above. (In the case of Project Milestone 0, the main purpose of this page is for you to let us know your e-mail address, and then let us assign you to a TA for your project supervisor.)

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

What is the domain of the application? Describe it.

The domain of our application is agriculture, and specifically community garden management. Community gardens allow individuals to grow crops within shared spaces. Thus, managing these gardens requires gardeners to rent plots, track and manage their own crops, and borrow shared equipment.

What aspects of the domain are modeled by the database?

This project models the management of gardeners, plots, planting activities, harvests, crops, water scheduling, and shared equipment, which include allocating crop work, tracking planting and harvests, and noting equipment assignments. This project plans the logistics of a large community garden. For example, this project can be used to track the progress of a crop from when it was planted to when it was harvested, including its location, overseer, the equipment used and its watering schedule.

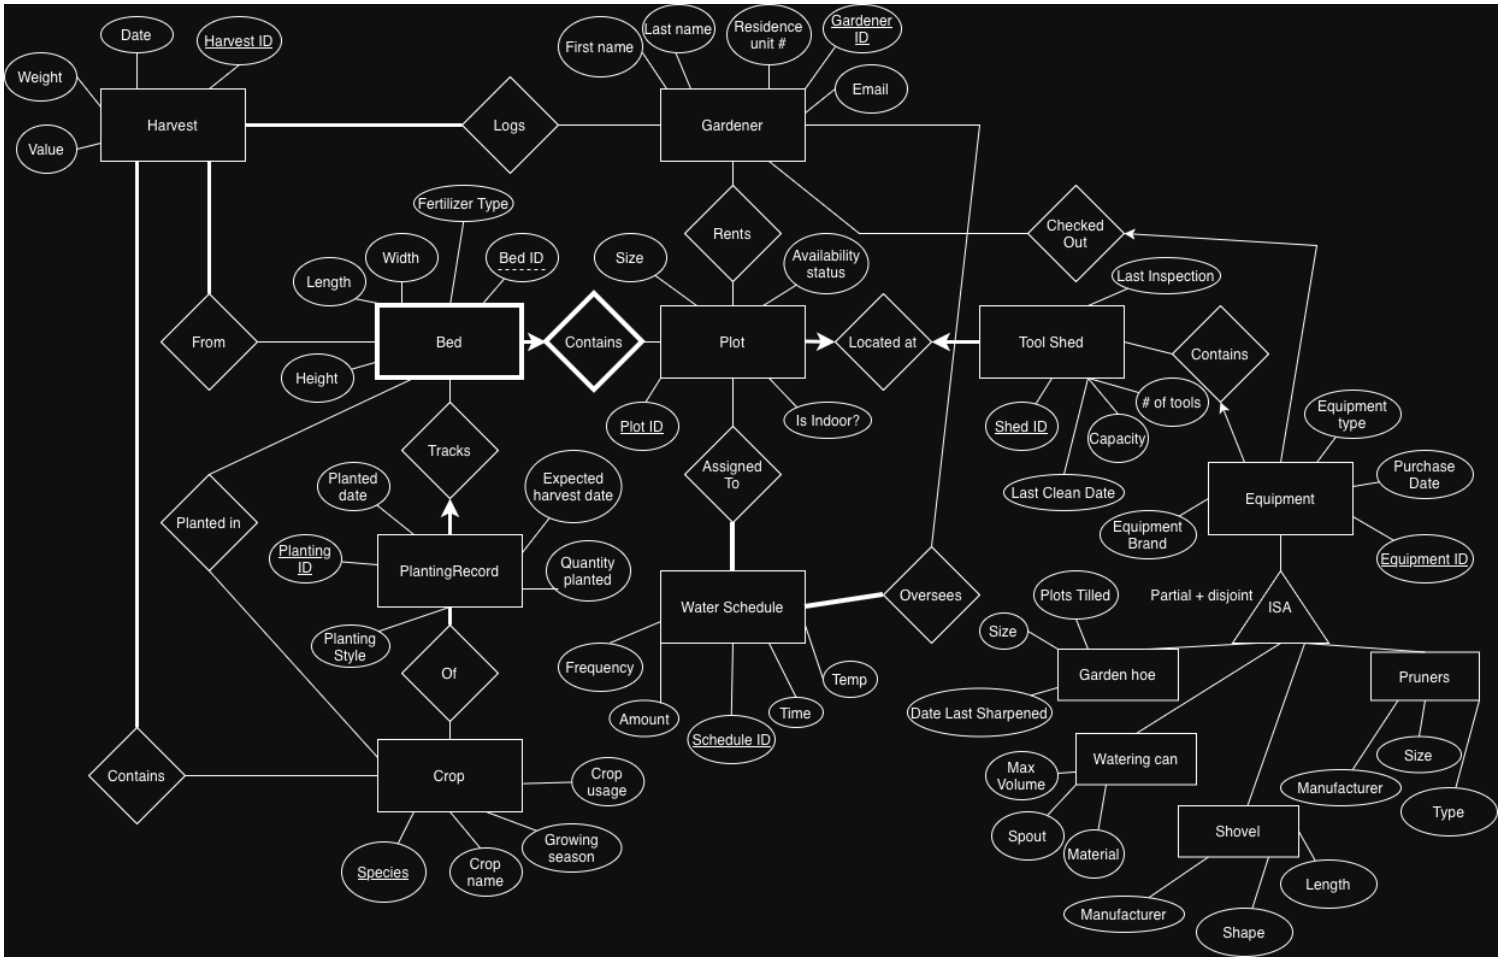

What functionality will the database provide?

This database allows users to see which gardeners have rented which plot and what equipment, and to assign themselves to plot and equipment. It allows users to create and track watering schedules, planting/harvest times & location, and the species of crops in each plot/harvest.

What platform will the final project be on? What is your application technology stack?

We aim to do a web-based system. We will be using Javascript, HTML, and CSS for the frontend, Java/JDBC for the backend, and Oracle for DBMS. For version control, we will be using Github.

Other comments, as appropriate, to explain your project.

No further comments.

An explicit acknowledgment about your use of AI tools in this assignment. Specifically, we are looking for a clear yes/no about whether you have used one or more AI tools. If yes, we want to know which tool(s) you have used and we want a PDF of the full conversation.

No use of AI.
