CPSC 304 Project Cover Page

Milestone #: 3

Date: July 31, 2026

Group Number: 41

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
George Yuan	11195369	s0w9l	gyuanedu@gmail.com
Adrian Wong	79387718	o3v5f	adrianwong200@gmail.com
Sam Dittmar	47583216	t6f7i	sam.dittmar@outlook.com

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above. (In the case of Project Milestone 0, the main purpose of this page is for you to let us know your e-mail address, and then let us assign you to a TA for your project supervisor.)

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

1. A brief (~2-3 sentences) summary of your project. Many of your TAs are managing multiple projects so this will help them remember details about your project.

Our project manages community gardens. It uses a database to allow users to see which gardeners have rented which plot and what equipment, and to assign themselves to plot and equipment. It allows users to create a watering schedule and track the progress of a crop from when it was planted to when it was harvested, including its location, overseer, and the equipment used.

2. Timeline and task breakdown/assignment: The breakdown should be at a level of detail that demonstrates that the group has spent time meaningfully considering what there is left to do. The timeline should make it clear that you understand the need for the project to use a GUI (see the milestone 4-5-6 description document for more information). It is not sufficient to just say something like "setup, front end, back end, database queries". You should be thinking about what exactly you must do for each of these steps.

To Do	Team Member	Deadline
Design overall GUI layout such as a navigation tab, input forms, data display, and status console - Create a sketch of pages for the GUI - Designing an intuitive GUI will be challenging, try to base off a website design style - Ensure navigation flow is intuitive to minimize user confusion	George, Sam, and Adrian	August 2
Implement Selection, Projection, and Join (non-hardcoded queries) - Variables with user input that are used in query functions - Add input validation (Handle invalid input without crashing)	George, Sam	August 3
Implement GUI controls that allows users to filter relations, select displayed attributes, and select and display related information from multiple tables - Decide between drop down menu vs button vs user inputs	Adrian, Sam	August 4
Implementation Aggregation with GROUP BY and HAVING queries - Create preset relational algebra to implement	George, Adrian	August 5
Implement GUI control interface for user to execute aggregation query	Sam	August 5

- Run using buttons		
Implement Nested Aggregation with GROUP BY and Division queries - Create preset relational algebra to implement	Sam, Adrian	August 6
Implement GUI control interface for user to execute above queries - Run using buttons	Adrian, George	August 6
Create 10 different queries that are useful, and implement GUI controls to execute - Will be challenging design queries that are practical for potential users	Sam, Adrian, George	August 7
Add sanitization, error handling, notifications for common errors, status for actions, and drop, recreate, and reload table functionality - Test all possible edge cases - Review code and SQL logic - Feedback to user must be clear	Sam, Adrian, George	August 8
Improve GUI visibility, code readability, organize GitHub, prepare deliverables, and verify all bugs have been fixed - Read over milestone rubric and description - Maintain consistency over multiple contributors' code - Run and interact with code	Sam, Adrian, George	August 9
Practice demonstration and submit project - Write script - Assign roles - Practice demo run	Sam, Adrian, George	August 11

3. An explicit acknowledgment about your use of AI tools in this assignment. Specifically, we are looking for a clear yes/no about whether you have used one or more AI tools. If yes, we want to know which tool(s) you have used and we want a PDF of the full conversation.

No AI used.
